

VIII. Mini Project-IPL Match Analytics

AIM:

To clean, process, analyze, and visualize IPL match and ball-by-ball datasets using Python, and create dashboard-based visualizations using Power BI and Tableau to derive meaningful insights into team performance, player statistics, seasonal trends, and match outcomes.

DOMAIN:

Sports Analytics / Cricket Analytics

PROBLEM STATEMENT:

The Indian Premier League generates a large amount of match and ball-by-ball data containing information about teams, players, runs, wickets, toss decisions, and seasonal performance. Analyzing this data manually makes it difficult to identify performance patterns and trends. Therefore, there is a need for a data-driven visualization system that processes IPL data and presents meaningful insights through statistical analysis and interactive dashboards.

OUTPUT:

PYTHON:

POWER-BI

Matches Won by Team

Total Runs Scored by Season

Matches Played by Season

Toss Winner vs Match Winner

TABLEAU

Matches Won by Team

Total Runs Scored by Season

Matches Played by Season

Top 10 Wicket Takers
